**Summary:** Basic guidelines for how to perform time limited follow up on a patient need that requires greater clinical expertise or discretion than can be performed by MA staff but that do not require provider level expertise.

**Examples:**

- Relaying a message regarding critical or abnormal labs or diagnostic imaging results and appropriate follow up actions to a patient on behalf of a provider. In this case, the provider should send the request to his or her care team RN with specific instructions for follow up and a summary of background information required to execute the follow up.
- Connecting patients with community resources. (In the case of patients that require ongoing case management, see protocol for RN Case Management).

**Guidelines for contacting / following up with patient:**

- The RN will attempt to make contact with a patient regarding follow up on a specific issue 3 times. If the first two attempts at contact are unsuccessful, a letter will be sent documenting the attempts to contact the patient and stating the reason for follow up. The RN can then document that a letter has been sent following 2 unsuccessful contact attempts and clear out the jelly bean. With each contact, the RN should state the purpose of contact and which attempt number of 2 is being made. Example:
  - “This is the first of two calls to remind you to ……”

**Guidelines for documenting follow up:**

- When documenting follow up actions, be simple and concise. Avoid using telephone encounters to make anecdotal comments on a situation; be mindful that all telephone encounters become a permanent part of the patient’s chart as locked progress notes.

**Effective Date:**

**Revision Date:**

**Supervisor Approval:**

**Initial**

**Medical Director Approval:**
